For Immediate Release

March 8, 2018

CITE is now accepting registrations for the following Instructor-Led (Blended) Courses

Program Planning for TSMO: March 16 – April 26, 2018 **NEW!**

Earn 1.0 CEUs

To be effectively implemented, TSMO needs to be recognized and structured as a core function of a transportation agency – more than simply a strategy or ad hoc set of activities, but as a cohesive program that is vital to the mission. In this course, you will define why TSMO is important to your organization, describe the key elements of TSMO program planning, and identify TSMO planning activities that help to develop and sustain the TSMO mission for your agency.

The audience includes state and local/city transportation agency personnel involved in traffic management, maintenance management, safety management and other operations functions for the transportation system.

Instructor: Gary Euler, Transportation Consultant

Connected Vehicles 102: March 23 – April 26, 2018 **NEW!**

Earn 0.8 CEUs

This course provides a foundation for why connected vehicle applications should be implemented and how they are connected to current transportation needs. As part of this course, you will conduct your own regional analysis to identify local needs, performance goals, and connected vehicle applications that address these needs and goals.

NOTE: Recommend taking CV101 prior to taking this course.

Instructor: Mike McGurrin, Principal at McGurrin Consulting, LLC

Archived Data for Planning, Operations, and Safety: March 29 – May 3, 2018

Earn 0.6 CEUs

This course is designed to help you understand the benefits of creating an open and accessible data archive of your agency's data. It will also explain the challenges you might face in trying to make your agency's data more open and available to others, and ways in which you can mitigate those challenges. After showing you some real-world examples of how data can be leveraged for better decision making and analysis, we'll discuss the pros and cons of building your very own archive, leveraging technologies that others have developed, or paying a consultant to help you with your archiving needs.

Instructor: Michael Pack, Director, University of Maryland CATT Lab

All course materials are online but students have access to course instructors through pre-scheduled conference calls. **Cost is \$250 each; \$400 for two (2).**

Register @ <http://www.citeconsortium.org/registration> . For more information, contact Denise Twisdale (mztwiz@umd.edu) or Kathy Frankle (kfrankle@umd.edu).

****Note:** 0.1 CEUs = 1 PDH; 1.0 CEUs = 10 PDH
